

SIMATS ENGINEERING
CO3 - ASSESSMENT TOOL - 1: Experiments

COURSE NAME: Cloud Computing and
Big Data Analytics

COURSE CODE: CSA1522

Name	M. Divyasree
Register Number	192524098

COURSE OUTCOME COVEREDCO3: *Implement cloud-based solutions using cloud storage, web APIs, and platform services for real-world applications. (BL3)*

Assessment Tool Weightage: 40%

Dave's Taxonomy: Precision (Level 3)
Question Count: 4

Total Marks: 40

Duration : 60 Minutes

Code of Conduct

I **M. Divyasree (192524098)** certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: *M .Divyasree*

Experiments Rubric

Criteria	Weightage	Level 4 - Exemplary	Level 3 - Proficient	Level 2 - Developing	Level 1 - Beginning
Experimental Design	25%	Design is systematic and technically strong	Mostly correct design	Basic design with gaps	Poorly designed activity
Use of Tools / Platforms	20%	Appropriate and effective use of cloud tools	Good tool usage with minor issues	Limited tool usage	Incorrect or missing tool usage
Application of Concepts	20%	Concepts are applied accurately to practical tasks	Mostly accurate application	Partial application	Weak application
Analysis and Output	20%	Strong analysis and meaningful outcome interpretation	Good analysis with minor gaps	Basic analysis	Little or no analysis
Documentation	15%	Clear, structured, and complete documentation	Mostly complete documentation	Partially complete	Poor documentation

Total Marks Awarded:

Assessment Tasks

Experiments

Experiment 1: Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Experiment 2: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Experiment 3: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Experiment 4: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

Experiment 1: Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Aim:

To create a simple **cloud-based Library Book Reservation System** for **SIMATS Library** using **Zoho Creator** as a Software as a Service application.

Steps:

1. Create a new application in Zoho Creator.
2. Create a Library Book Reservation form.
3. Add fields: Title of Book, Author, Publication, Year, Edition, No. of Copies, Rack No., and Status.
4. Create a report to view, search, and manage book reservation details.
5. Enter sample book records and verify the reservation system.
6. Test the application using the Zoho Creator cloud platform.

Implemented:

Step1: Goto [zoho.com](https://www.zoho.com) and click the creator

Step 2: Create a new application from scratch in Zoho Creator.

Result: The Software has Been Created

The cloud-based Library Book Reservation System was successfully created using Zoho Creator. The system allows users to store, view, and manage library book details and track the Taken/Returned status of books through a Software as a Service-based cloud application.

Experiment 2: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Aim:

To create a simple cloud-based Payroll Processing System using Zoho Creator to demonstrate Software as a Service (SaaS) and manage employee payroll details.

Steps:

1. Create a new application in Zoho Creator.
2. Create an Employee Payroll form.
3. Add fields: Employee Name, Experience in Present Organization, Overall Experience, Basic Pay, HRA, DA, TA, Gross Pay, and Net Pay.
4. Create a Payroll Report to view and manage employee salary records.
5. Enter sample employee details and verify the payroll information.
6. Test the application on the Zoho Creator cloud platform.

Implemented:

Step1:Goto zoho.com and click the creator

Step 2: Create a new application from scratch in Zoho Creator.

Result: The Software has Been Created

The cloud-based Payroll Processing System was successfully created using Zoho Creator. The application allows employee and salary details to be stored, viewed, and managed through a Software as a Service-based cloud platform.

Experiment 3: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Aim:

To demonstrate virtualization by installing a Type-2 Hypervisor (VMware Workstation) and creating a Virtual Machine with 1 CPU, 2 GB RAM, and 15 GB storage.

Steps:

1. Open VMware and select Create New Virtual Machine.
2. Select the Ubuntu ISO file.
3. Set the VM name as Ubuntu-VM.
4. Set RAM = 2 GB and CPU = 1.
5. Set the hard disk size = 15 GB.
6. Start the VM and install Ubuntu.

Implemented:

1. Open VMware and select Create New Virtual Machine.

2. Select the Ubuntu ISO file.

3. Set the VM name as Ubuntu-VM.

4. Set RAM = 2 GB and CPU = 1.

.5 Set the hard disk size = 15 GB.

6.Start the VM and install Ubuntu.

Experiment 4: Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux). Create a Cloning of a VM and Test it by loading the Previous Version/Cloned VM

Aim

To demonstrate **virtualization** by installing a **Type-2 Hypervisor (VMware Workstation)**, creating a Virtual Machine with a Windows/Linux operating system, and **cloning the VM** to create and test a previous version of the Virtual Machine.

Steps

1. Open VMware and select Create New Virtual Machine.
2. Select the Ubuntu ISO file.
3. Set the VM name as Ubuntu-VM.
4. Set RAM = 2 GB and CPU = 1.
5. Set the hard disk size = 15 GB.
6. Start the VM and install Ubuntu.

1 Open VMware and select Create New Virtual Machine.

2. Select the Ubuntu ISO file.

3. Set the VM name as Ubuntu-VM.

4. Set RAM = 2 GB and CPU = 1.

.5 Set the hard disk size = 15 GB.

6.Start the VM and install Ubuntu.
